Gear Group Name	Field Gear ID	Gear Name	Config ID	Config Name	Specifications
Benthic Grab	BGEK	Ekman grab	EKMAN	Ekman Dredge	
Benthic Grab	BGPON	Ponar grab	PONAR	Ponar Dredge	
Electroshock	ESBP	Backpack electroshock	BK-PK	name	
Electroshock	ESBM	Boat-mounted electroshock	VVP-15	Large Stream Electroshock	For larger rivers an 18 foot work barge with a 2-cycle 65 hp Evinrude and a 2- cycle 25 hp Johnson kicker motor mounted on the left side. A Honda EX4000 is used to power a Coffelt Electronics VVP 15. This rig is capable of producing an output very close to 4000 watts and will maintain this for about 2 hours any longer than this requires lowering the power output to about 3500 watts or it will start throwing the breaker on the generator. The pulsator is capable of handling up tp 10,000 watts (AC) but the generator limits us to 4000 watts. From an output of about 1000 to about 2500 there doesn't seem to be a lot of difference in effectiveness. Once the power output is increased to about 3000 and over one can see a marked difference. The aluminum boat hull is used as the cathode. The anode is a 10 foot long fiberglass pole with a stainless steel loop at the end. The pulsators both have adjustable frequency and pulse width. When using pulsed DC current a frequency of about 80 hz seems to be the most effective. The pulse width is set to less than 20% so the duty cycle is lowered at the same output.
Electroshock	ESBM	Boat-mounted electroshock	VVP-2	Small Stream Electroshock	For smaller rivers and streams a 14 foot LOWE john boat with a 2- cycle 15 hp Johnson Outboard (in slow waters a Minn-Kota Endura 30 trolling motor is used). A Homelite 1750 watt generator and a Coffelt Electronics VVP-2 pulsator are used to collect fish. This rig has a maximum power output of about 1400 watts, it is not possible to maintain this power output because the generator will overheat and shut down. Instead a power output of about 1200 to 1000 watts (depending on the conductivity of the

Benthic Grab	BGBM	Boomerang grab	CBG-008	.25 sq meter- ID-67	This grab has been modified to increase reliability, see Manning, 1987, pp 129-134.
Benthic Grab	BGSM	Smith-McIntire grab	CBG-007	.25 sq meter-ID-3425	Standard Grab, with no modifications.
Electroshock	ESBM	Boat-mounted electroshock	CBG-013	Manning Hot-Shot 2000	This is a custom design boat mounted shocker from the Manning Scientific & Correctional Facility Supply Company. This unit is equipped with the exclusive "Manning Deep Fry" option which increases the AMP range of a normal shocker 200 fold. Properly adjusted, this unit combines aspects of a fisheries evaluation with a first-class dinner on-site.
Miscellaneous/Other	MSHL	Hook and line	CBG-015	Fly Rod, 3 lb test	This is a high performance graphite fly rod equipped with 3 lb test and is used for collection of Red Drum, Striper, Sea Trout, Bone Fish. In the hands of an expert, a very effective collection configuration.
Miscellaneous/Other	MSOTH	Other	CBG-016	Scalpel, #3 Blade	Sharp.
Net/Horizontal Tow	NTOT	Otter trawl	CBG-014	Chesapeake Bay Otter Trawl-1	<p>This is a highly modified Otter Trawl, it was customized designed by the Manning Scientific & Correctional Facility Supply Company, it incorporates the exclusive "Manning Escape Proof" feature. The main body of the net is constructed of #9 twine, 1-1/2" str. mesh and bag of the trawl is made of #18 twine, 1-1/2 " str. mesh. Both of these panels are dipped in commercial grade green net dip to increase net life. The top and bottom lines of the trawl extend 4' and are attached through holes at the back of the trawl doors. The top line of the trawl opening is constructed 3/8" PolyDac line and has four floats (PVC foam, 2-1/2 " dia., 1-1/2" long) spaced along its entirety. The bottom line of the trawl mouth is constructed of 3/8" PolyDac line and is weighted by a 6 ft length of 1/4" chain.</p> <p>The doors are pentagonal in shape and are made of 3/8" marine plywood and weighted with a steel bar (iron) along the inside length. The doors measure 36" along their outer edge, 18" along their back, and 31 " along the inside edge</p>

Benthic Corer	BCHC	Hand corer	CORER-1	Hand Corer, 6 in dia	
Benthic Grab	BGVV	Van Veen grab	VAN-VEEN-1	Van Veen grab samplers	For EMAP-Estuaries Virginian Province and National Coastal Assessment-Northeast, a 1/25 (0.04) m2, Kynar-coated stainless steel, Young-modified Van Veen grab sampler was used to collect sediments. This grab sampled an area of 440 cm2 and had a maximum depth of penetration in the sediment of 10 cm. For EMAP-West, either a 0.1 or 0.04 m2 Young-modified Van Veen sediment grab made of Kynar-coated stainless steel was used to collect sediments.
Net/Horizontal Tow	NTOT	Otter trawl	OTTER-01	Otter Trawl for Fish/Shellfish	The EPA standard fish trawl was conducted which filters fish from the near bottom waters. The trawl net is a funnel-shaped high-rise sampling trawl. The net includes a 16 meter tow line, a chain sweep, 5 cm mesh wings, and a 2.5 cm cod end. Fish were herded into the net by ground wire and an overhanging panel. Standard trawls were 10 ± 2 minutes in duration with a towing speed of 2-3 knots through the water against the prevailing current (1-3 knots relative to the bottom).
Net/Horizontal Tow	NTSV	Single-vessel operated tow net	TRWL-NCANE	High-rise trawl: 2000 NCA-NE	The EPA standard fish trawl was conducted which filters fish from the near bottom waters. The trawl net is a funnel-shaped high-rise sampling trawl. The net includes a 16 meter tow line, a chain sweep, 5 cm mesh wings, and a 2.5 cm cod end. Fish were herded into the net by ground wire and an overhanging panel. Standard trawls were 10 ± 2 minutes in duration with a towing speed of 2-3 knots through the water against the prevailing current (1-3 knots relative to the bottom). Different state cooperative agreements used different standard procedures: CT, MA and RI trawl duration was 20 minutes; NH was 4 minutes. Therefore, fish community measures cannot be easily compared across all states.

Miscellaneous/Other	MSOTH	Other	E-SHOCK	Electroshocking	Electrode shocker powered by a backpack generator and/or a Boat-mounted electroshocker
Miscellaneous/Other	MSOTH	Other	NETS-SHOCK	Seine/Shock Combination	Records are incomplete and this configuration may include a combination of procedures, seining and shocking as described below. The collection of fish follows a modified version of the EPA Rapid Bioassessment Protocol V (EPA, 1989) supplemented by other documents. Specific techniques for, and relative advantages of seining and electrofishing vary considerably according to stream type and conductivity. The specifics are discussed in detail in Fisheries Techniques (edited by L.A. Nielsen and D.L. Johnson and published by the American Fisheries Society 1983). The collection of fish involves the use of two collection methods, seining and electroshocking. The combination of methods was selected in order to produce a representative fish collection. Variations of habitat, type of fish, and water chemistry dictate the use of different collection techniques. In general, each stream is sampled for a distance of 400 m. Seining is conducted before shocking. Seine height is dictated by water depth, and length is determined by width of the water being sampled. If possible, the seine should be 15-25% longer than the width of the waterbody being sampled and about 25% higher than the depth of the water. The seine is hauled with the current because fish tend to orient towards the current. Electrofishing involves the use of a backpack shocker that consists of a trailing stainless steel cable electrode and ring electrode mounted on the end of a fiberglass pole. The shocking team consists of at least two

					<p>people. One carries and operates the shocker while the other(s) net stunned fish. The shocker is most useful where a seine cannot be used effectively in areas such as brush piles, rootwads, and cobble substrates. The forward electrode is gradually passed back and forth as the team walks downstream. As fish are stunned, they usually roll over and become more visible, allowing the netters to see and capture them. In waters of high conductivity ($> 1000 \mu\text{S/cm}$) electroshocking is ineffective, due to the highly conductive nature of the water. Under these conditions, only seining is conducted. In general, all fish are placed in 10% formalin immediately after capture. However, if larger fish ($> 100 \text{ g}$) can be positively identified in the field, they are returned to the water in a location where recapture is unlikely. All large fish released are photographed on print film. A representative photograph is taken when large numbers of one fish species is collected and released. Collected organisms are identified to species by an experienced taxonomist.</p>
Miscellaneous/Other	MSOTH	Other	SEINE NETS	Seine Nets	<p>4 x 10, 6 x 30, and 4 x 30 seines and any nets of other sizes are used as preferred by the crew leader. All seines should be $\frac{1}{4}$ inch mesh. Dip nets are also used to collect shocked fish.</p>

WY-DEQ		Wyoming Dept. of Environmental Quality			
Gear Group Name	Field Gear ID	Gear Name	Config ID	Config Name	Specifications
Trap/Substrate	TRSU	Surber sampler	GR-MACROS	Surber Sampler	<p>The Surber Sampler involves a one foot square frame that is placed onto the stream substrate. The mesh size is 500 microns, (1000 in 1992) and the vertical section of the frame has the net attached and captures the dislodged organisms from the sampling area. The Sampler is placed eight times, at randomly determined locations, throughout the riffle and a composite sample is taken. The Surber sampler is used on the collection of macroinvertebrates because it:</p> <ol style="list-style-type: none"> 1. is a common and widely used sampler for stream riffle habitat; 2. Ensures that a standard area of the substrate is sampled; 3. Ensures equal sampling effort among locations for optimal comparability; 4. Provides quantitative data that results in better resolution among stream types than for qualitative data (Robinson and Minshall, 1992)
Water Sampler	WSWB	Water bottle	GR-WATER	Water Sample Container	<p>These plastic containers are used for the collection of water samples and the size of the bottle depends on the parameter of consideration. Glass containers are used in the collection of Oil and Grease samples.</p>
